An agent under the hood.

What we want the device to handle so you can get on with your day.

v/h In your hands

A clear action.
A useful result.

The controls should relate to the task.
The result should be understandable.

Simple controls and clear feedback. vh.do

v/h Inside the device

Understand.
Act.
Check.

A local model uses the device's inputs to interpret the task. Its tools let it act. Feedback lets it check the result and adjust when conditions change.

The software needs a way to do the work.

vh.do

v/h The reason to use an agent

It has to earn its place.

A better result

The job is completed more successfully.

Less effort

The owner has less work to do.

More useful capability

The device handles ordinary variation.

---

v/h The experience we're designing

Intelligence inside.

Simplicity outside.

A useful core function that works locally.

An understandable way to start and finish.

An object you can depend on.

Our first utility is in development.

vh.do
